Madras Diabetes Research Foundation

As nutrition research has gained momentum in non-communicable diseases, this year as a part of Dr. Mohan's International Diabetes Update the Department of Foods, Nutrition, and Dietetics Research hosted and enriched nearly 600 students and faculty of nutrition from various institutions across Tamil Nadu through interactive evidence-based nutrition symposiums.

From the department of FNDR the article titled "Macronutrient Recommendations for Remission and Prevention of Diabetes in Asian Indians Based on a Data-Driven Optimization Model: The ICMR-INDIAB National Study" in Diabetes Care was published.

Our research on consumption of almonds among adults with overweight or obesity published in the Frontiers of Nutrition concluded that daily intake of 43 grams of almonds reduced insulin resistance and serum cholesterol aiding in cardiometabolic risk reduction. We have also undertaken a study to report the dietary advanced glycation end products (dAGEs) content of Indian foods to throw light on the effect of high and low dAGE diets on metabolic risk factors in overweight and centrally obese Indian adults. LowdAGE diets improved insulin secretion.

THE TIMES OF INDIA

Eat just 43 gram of almonds daily, and you will get these health benefits
